20. **1st Time in the Country, Angiogenesis** was performed by Dr. P Lal in April 1998. This helps in production of new blood vessels at the site of block. The procedure was done by injecting VGEF a growth hormone in the “No-option” patients unfit both for bypass and angioplasty and was used as last resort. In some patient stem cells were prepared from the bone marrow and similarly were injected. Follow up was limited.
